Dear Ash,

RE: VisionLine IFS 6 Insulated Flue System

We have completed testing according to Appendix B of AS/NZS2918;2018 on solid fuel appliances with kW Outputs up to 15kW with the VisionLine IFS 6 Insulated Flue System. There was no difference in the thermal clearances recorded between the original Triple skin/default flue kits and the VisionLine IFS 6 Insulated Flue System.

It is in our opinion that the VisionLine IFS 6 Insulated Flue System can be used to replace similar flue kits that use a 6" active and rear 900mm flue shield, solid or decromesh casing below the ceiling penetration on appliances up to 15kW when the VisionLine IFS 6 Insulated Flue System is installed with a reflective stainless steel 900mm x 180° rear flue shield fitted directly above the appliance to the ceiling.

The flue rear heatshield is not required for appliances with an average kW of less than 12kW.

All appliances must be installed at the clearances specified in their original test reports.

Warm regards,

Steve Marland
Managing Director
Australian Solid Fuel Testing
